This two-day course provides an in-depth understanding of how to guide good urban form through a regulatory framework. Participants learn to create form-based codes by drawing upon an area’s best urban elements to conceptualize the elements that shape public space and community character. Instructors delve into the basics of urban form, combining lecture and case studies with “hands-on” participatory exercises in the essential tasks of coding.

The Form-Based Codes Institute (FBCI) of Smart Growth America is a professional organization dedicated to advancing and understanding the use of form-based codes—the regulatory framework for mixed-use, walkable urbanism. FBCI’s three-course curriculum prepares land use professionals to draft, adopt and administer form-based codes in their communities.

Please consult the class page for details on registration, lodging options, class agenda, and instructors. This class is eligible for 16 AICP CM credits. Note: FBC 101, which is offered online, is prerequisite for this class.
